

Spatial development questions (to be answered) from the team of Puy du Fou

Urban planning:

- => **critical point:** What are the requirements to elaborate in detail on the new urban planning of the ground?
- => **critical point:** Is it possible to put the high electric line underground? That is at least regarding 8 pylons.
- => **critical point:** The expansion of the industrial area along the highway and the noise of the highway are nuisances for the park. We need to create a sound and visual barrier, is that possible?
- => **critical point:** Are there difficulties with obtaining the land or possible objections from many farmers?

- Is the current energy network solid enough to provide power for the entire park?
- Is the Meppel's wastewater treatment plant sufficient as it is in regards to the plans of the theme park? In Puy du Fou France, our own wastewater treatment plant is calculated for 7000 people.
- Are there some infrastructural projects foreseen in the next 10 years near the plot which could have an impact on the park? E.g. an extra train track, gaspipe, wind farm or others?

Landscaping and environment:

- There is a natural protected area in the center of the park. Are there other environmental regulations or restrictions which could have impact on the design?
- Are there any protections in place for current water channels, trees / forests, hedges or bushes?
- Are there some constraints or obligations for creating new land / hills using ground modeling or creating a new type of landscaping with no local plant species?
- Are there some obligations to produce renewable energy on the plot?
- Are there some projections on the rise in water level caused by climate change?
